

## GPCR Profiling

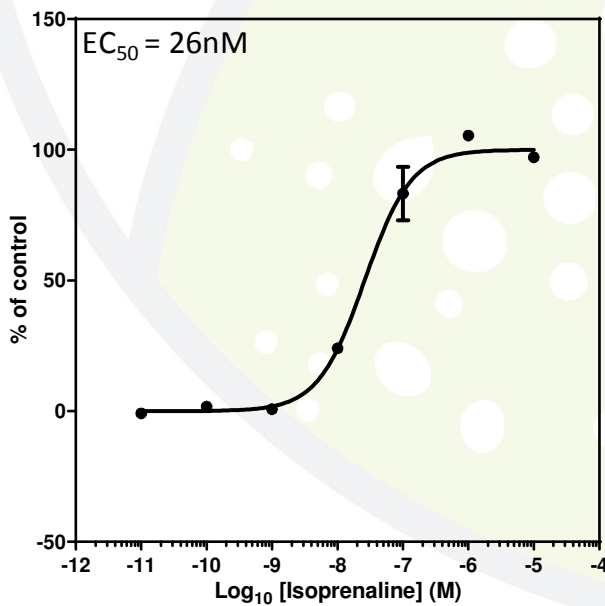

Target: Adrenergic  $\beta$ 2

Available Assays: Cell-Based

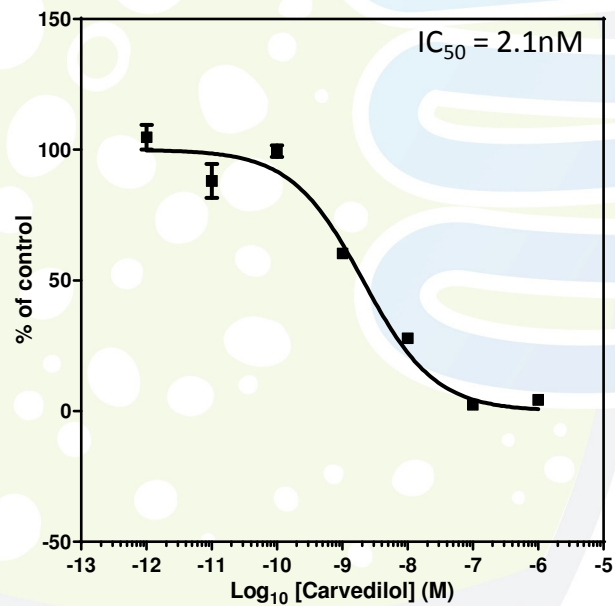

Cell-Based Agonist: Isoprenaline

Cell-Based Antagonist: Carvedilol

EC<sub>50</sub> of **Isoprenaline**, ADRB2

IC<sub>50</sub> of **Carvedilol**, ADRB2

GPCR-expressing cells were plated in black, clear-bottomed 96 well plates at a density of 25,000 cells per well in 100 $\mu$ l volume and incubated overnight. Next day, medium was removed and 25  $\mu$ l HBSS buffer (HEPES buffered Hank's balanced salt solution) was added to the wells. 10  $\mu$ l calcium 5 dye (prepared according to the manufacturer's instructions in HBSS) was added and plates incubated at 37°C for 1 hour. If appropriate, antagonists were added and incubated for 5 min at RT. The plates were then placed in a fluorescence reader whereupon agonist was added and fluorescence monitored.
